

Water Wind Sun and Sea, by Michael Greenacre

WATER

I looked down from the mountain, down to the valley,
River was running swift and strong, down to the sea.
Papa Newton realized when the apple fell from the tree,
There's a lot of water power in the force of gravity!
So why are we still burning coal when there's Water, Wind, Sun and Sea!

WIND

Driving through the barren south, what there did I see?
On every hill, a tall windmill, turning steadily,
Like ballet dancers they move their arms so gracefully,
Wind comes up, turbines turn, and it's all for free!
So why are we still burning coal when there's Water, Wind, Sun and Sea!

SUN

Brother sun gives life on earth to animal, plant and tree,
Radiating heat and light on and on naturally,
So much more we can take by man's ingenuity,
Silver sheets face to the skies making electricity!
So why are we still burning coal when there's Water, Wind, Sun and Sea!

SEA

Sister moon also plays her part, affecting ocean and sea,
Tide goes out, tide comes in, that I can guarantee,
Just put something in its path, then you'll have energy,
Learning from nature is the key: you just have to agree!
So why are we still burning coal when there's Water, Wind, Sun and Sea!

Performers

Diya & friends (*voices*)
Astrio: Santi Careta (*electric guitar & banjo*)
 Arecio Smith (*electric piano*)
 Santi Serratosa (*drums*)
Antonio Torres (*drums*)
Jordi Blanes (*electric bass*)
Michael Greenacre (*Hammond organ*)
Marcel·li Bayer (*saxophone*)
